

@defer

Code:

This screenshot shows the Visual Studio Code editor with the Explorer sidebar on the left and the Editor view on the right. The Explorer sidebar shows a project structure with a 'src' folder containing 'app' and 'hello' subfolders. The 'app.component.html' file is selected in the Explorer. The Editor view shows the content of 'app.component.html' with the following code:

```
src > app > app.component.html > div
1 <h1>defer has triggers and logical expressions</h1>
2
3 <div #comments>Hovering...</div>
4
5 @defer (on hover(comments)){
6   <app-hello></app-hello>
7 }
```

This screenshot shows the Visual Studio Code editor with the Explorer sidebar on the left and the Editor view on the right. The Explorer sidebar shows the same project structure as the previous screenshot, but now 'hello.component.html' is selected. The Editor view shows the content of 'hello.component.html' with the following code:

```
src > app > hello > hello.component.html > p
1 <p>Hello Component</p>
```

Output:

Before Hovering:

After Hovering:
